

LegUp LandinGear

Like Nothing You Have Seen Before

This may be the most unique accessory you have ever seen for your Touring Bike. Imagine the ability to steady your bike as you come to a stop, have it held upright at a light or stop sign with your feet on the pegs (you really should put them down, but you don't have to!!), then have the support automatically retract as you accelerate !!

The Patented LegUp™ system was created for those who for whatever reason are concerned about, or unable to hold up these 850 lb monsters as they come to a stop. New riders, bad knees, bad hips, bad passengers (couldn't resist!), or any other reason someone might want a little help keeping the rubber side down... This will do it!

This PATENTED, computerized system is centered around an electric linear actuator, that lowers, at the touch of a button, legs with wheels and a spring mechanism. This system will only allow the wheels to lower under 10MPH, and will balance the bike completely on level terrain. You still put your feet down, but LegUp™ makes it feel much lighter and is always there to help! The onboard computer senses speed and wheel position and upon acceleration, if the operator does not retract the wheels, LegUp™ will raise them automatically. Semi-automatic deployment (lowering) of the wheels is also supported! With the wheels down, you can lean your bike a bit each way (about half as much as with the wheels retracted!), which lets you adjust for uneven terrain, and make turns at slow speed with some help!

The wheels tuck neatly under the bags when not deployed, allowing the bike to be leaned and handle exactly as it always has. Please understand that LegUp™ is just that; an assistant to help you balance these big bikes as you start, stop and maneuver them slowly! LegUp™ is not a Trike system, but for many can give them the benefits they would need from a trike, and still allow them to ride their bikes as they always have!

There is Absolutely no cutting or changes to your bike that cannot be reversed if you sell your bike or wish to move LegUp™ to another bike.
